Friedrichshafen DE, 5<sup>th</sup> April 2017

## Tecnam introduce the P2006T Twin MkII

Tecnam unveiled at AERO Friedrichshafen today a major upgrade to its best-selling P2006T next-generation Twin.

With over 200 P2006T Twin's operating worldwide, it is already firmly established as the twin aircraft of choice by both leading Flight Training Organizations and private owners alike.

The P2006T Twin MkII offers unbeatable value, coupled with low operating and ownership costs, innovative design and Italian styling. The Rotax '912S' allows the Tecnam P2006T to lead with respect to the environment too. With both a remarkable fuel saving offering and much lower noise emissions, it has redefined both the flight training and aircraft ownership experience in one step.

The P2006T Twin MkII features a number of significant enhancements including the introduction of the **Garmin G1000 Nxi Next Generation Flight Deck** and improved levels of comfort for passengers and pilots alike.

Garmin's innovative G1000 Nxi state-of-the-art avionics platform features wireless cockpit connectivity, including wireless database updates using Garmin Flight Stream, enhanced situational awareness with 'SurfaceWatch', visual approaches, map overlay on the HSI and more.

Pilots will appreciate the G1000 Nxi's processing power that supports even faster map rendering and smoother panning throughout the displays. Garmin have focused on saving valuable time in the cockpit with the displays initializing within seconds after start-up, thereby providing immediate access to flight plan data and frequencies.

As a further safety enhancement Tecnam have now included the provision ADS-B OUT as standard on all P 2006T aircraft. Pilots in an ADS-B IN equipped cockpit have the ability to see, on their flight display, other traffic operating in the airspace as well as access to clear and detailed weather information. They will also be able to receive pertinent updates ranging from temporary flight restrictions to runway closings.

Cabin upgrades include a new seat design, with electronic switches to control height and comfort and an improved lighting system featuring both ambient light and dimmer switches.

#### **About TECNAM; “Quality Aircraft since 1948”**

TECNAM's roots go all the way back to the Italian brothers Luigi and Giovanni Pascale who began to develop and produce innovative aircraft soon after the end of WWII. Since those early beginnings, the family has continued to create original models, first gaining worldwide recognition under the name Partenavia, which translates as "Naples Aviation".

Costruzioni Aeronautiche **TECNAM** was established in March 1986 and now operates in three production facilities. The Casoria facility is located adjacent to Naples' Capodichino Airport while the main factory is next to the “Oreste Salomone” Airport in Capua. Recently a new facility was established in Sebring, Florida, USA to serve and support the needs of Tecnam's North American-based owners and operators.
